Hawkish comments from BOE member Sentance has aided a strong bid in the Cable, and it is currently sitting above good resistance turned support at **1.6238-42**. This level has acted as somewhat of a pivot in recent weeks, thus the market becomes immediate term bullish above here.

A sharp around the **1.4585** and **1.4547-58** levels leaves the Euro poised going into the ECB meeting today. A break downward below **1.4444-55** should leave the market immediate term bearish, targeting another test of horizontal channel support at **1.4257-64**. Otherwise a firm break above **1.4600** targets the **1.4700** handle.

The USD/JPY has recovered a large part of the sell-off seen on Tuesday, and thus remains immediate term bullish above the **91.10** and **91.26** levels.
